INTESA 🚾 SANPAOLO

PRESS RELEASE

INTESA SANPAOLO PASSES THE EU-WIDE STRESS TEST

Torino, Milano, 15 July 2011 - Intesa Sanpaolo was subject to the 2011 EU-wide stress test conducted by the European Banking Authority (EBA), in cooperation with the Bank of Italy, the European Central Bank (ECB), the European Commission (EC) and the European Systemic Risk Board (ESRB).

Intesa Sanpaolo notes the announcements made today by the EBA and the Bank of Italy on the EU-wide stress test and fully acknowledges the outcomes of this exercise.

The EU-wide stress test, carried out across 90 banks covering over 65% of the EU banking system total assets, seeks to assess the resilience of European banks to severe shocks and their specific solvency to hypothetical stress events under certain restrictive conditions.

The assumptions and methodology were established to assess banks' capital adequacy against a 5% Core Tier 1 capital benchmark and are intended to restore confidence in the resilience of the banks tested. The adverse stress test scenario was set by the ECB and covers a two-year time horizon (2011-2012). The stress test has been carried out using a static balance sheet assumption as at December 2010. The stress test does not take into account future business strategies and management actions and is not a forecast of Intesa Sanpaolo profits.

As a result of the assumed shock, the estimated consolidated Core Tier 1 capital ratio of Intesa Sanpaolo would change to **8.9%** under the adverse scenario in 2012 compared to **7.9%** as of end of 2010. This result incorporates the effects of the Capital Increase fully committed up to 30 April 2011 and fully subscribed within 22 June 2011 and does not take into account future mitigating actions planned by Intesa Sanpaolo.

Details on the results observed for Intesa Sanpaolo:

The EU-wide stress test requires that the results and weaknesses identified, which will be disclosed to the market, are acted on to improve the resilience of the financial system. Following completion of the EU-wide stress test, the results determine that Intesa Sanpaolo meets the capital benchmark set out for the purpose of the stress test. The bank will continue to ensure that appropriate capital level must be maintained.

Notes to editors

The detailed results of the stress test under the baseline and adverse scenarios as well as information on Intesa Sanpaolo credit exposures and exposures to central and local governments are provided in the accompanying disclosure tables based on the common format provided by the EBA.

The stress test was carried out based on the EBA common methodology and key common assumptions (e.g. constant balance sheet, uniform treatment of securitisation exposures) as published in the EBA Methodological note. Therefore, the information relative to the baseline scenarios is provided only for comparison purposes. Neither the baseline scenario nor the adverse scenario should in any way be construed as a bank's forecast or directly compared to bank's other published information.

See more details on the scenarios, assumptions and methodology on the EBA website: <u>http://www.eba.europa.eu/EU-wide-stress-testing/2011.aspx</u>

Results of the 2011 EBA EU-wide stress test: Summary (1-3)

Name of the bank: INTESA SANPAOLO SPA

Actual results at 31 December 2010	million EUR, %
Operating profit before impairments	7.003
mpairment losses on financial and non-financial assets in the banking book	-3,072
Risk weighted assets ⁽⁴⁾	332,132
Core Tier 1 capital ⁽⁴⁾	26,159
Core Tier 1 capital ratio, % ⁽⁴⁾	7.9%
Additional capital needed to reach a 5 % Core Tier 1 capital benchmark	

Outcomes of the adverse scenario at 31 December 2012, excluding all mitigating actions taken in 2011	%
Core Tier 1 Capital ratio	7.4%
Outcomes of the adverse scenario at 31 December 2012, including recognised mitigating measures as of 30 April 2011	million EUR, %
2 yr cumulative operating profit before impairments	12,314
2 yr cumulative impairment losses on financial and non-financial assets in the banking book	-9,883
2 yr cumulative losses from the stress in the trading book	-1,197
of which valuation losses due to sovereign shock	-554
Risk weighted assets	359,113
Core Tier 1 Capital	31,951
Core Tier 1 Capital ratio (%)	8.9%
Additional capital needed to reach a 5 % Core Tier 1 capital benchmark	
Effects from the recognised mitigating measures put in place until 30 April 2011 ⁽⁵⁾	
Equity raisings announced and fully committed between 31 December 2010 and 30 April 2011 (CT1 million EUR)	5,458
Effect of government support publicly announced and fully committed in period from 31	

 Effect of government support publicly announced and rully committed in period from 31
 0.0

 December 2010 to 30 April 2011 on Core Tier 1 capital ratio (percentage points of CT1 ratio)
 0.0

 Effect of mandatory restructuring plans, publicly announced and fully committed in period from 31
 0.0

 31 December 2010 to 30 April 2011 on Core Tier 1 capital ratio (percentage points of CT1 ratio)
 0.0

Additional taken or planned mitigating measures	percentage points contributing to capital ratio
Use of provisions and/or other reserves (including release of countercyclical provisions)	0.0
Divestments and other management actions taken by 30 April 2011	0.3
Other disinvestments and restructuring measures, including also future mandatory restructuring not yet approved with the EU Commission under the EU State Aid rules	0.0
Future planned issuances of common equity instruments (private issuances)	0.0
Future planned government subscriptions of capital instruments (including hybrids)	0.0
Other (existing and future) instruments recognised as appropriate back-stop measures by national supervisory authorities	0.0
Supervisory recognised capital ratio after all current and future mitigating actions as of 31	
December 2012, % ⁽⁶⁾	9.2%

Notes

(1) The stress test was carried using the EBA common methodology, which includes a static balance sheet assumption and incorporates regulatory transitional floors, where binding (see http://www.eba.europa.eu/EU-wide-stress-testing/2011.aspx for the details on the EBA methodology).

(2) All capital elements and ratios are presented in accordance with the EBA definition of Core Tier 1 capital set up for the purposes of the EU-wide stress test, and therefore may differ from the definitions used by national supervisory authorities and/or reported by institutions in public disclosures.

(3) Neither baseline scenario nor the adverse scenario and results of the stress test should in any way be construed as a bank's forecast or directly compared to bank's other published information.

(4) Full static balance sheet assumption excluding any mitigating management actions, mandatory restructuring or capital raisings post 31 December 2010 (all government support measures and capital raisings fully paid in before 31 December 2010 are included).

(5) Effects of capital raisings, government support and mandatory restructuring plans publicly announced and fully committed in period from 31 December 2010 to 30 April 2011, which are incorporated in the Core Tier 1 capital ratio reported as the outcome of the stress test.

(6) The supervisory recognised capital ratio computed on the basis of additional mitigating measures presented in this section. The ratio is based primarily on the EBA definition, but may include other mitigating measures not recognised by the EBA methodology as having impacts in the Core Tier 1 capital, but which are considered by the national supervisory authorities as appropriate mitigating measures for the stressed conditions. Where applicable, such measures are explained in the additional announcements issued by banks/national supervisory authorities. Details of all mitigating measures are presented in the worksheet "3 - Mitigating measures).

Notes and definitions

(1) The stress test was carried using the EBA common methodology, which includes a static balance sheet assumption (see http://www.eba.europa.eu/EU-widestress-testing/2011.aspx for the details on the EBA methodology).

(2) All capital elements and ratios are presented in accordance with the EBA definition of Core Tier 1 capital set up for the purposes of the EU-wide stress test, and therefore may differ from the definitions used by national supervisory authorities and/or reported by institutions in public disclosures.

(3) Neither baseline scenario nor the adverse scenario and results of the stress test should in any way be construed as a bank's forecast or directly compared to bank's other published information.

(4) Regulatory transitional floors are applied where binding. RWA for credit risk have been calculated in accordance with the EBA methodology assuming an additional floor imposed at a level of RWA, before regulatory transitional floors, for December 2010 for both IRB and STA portfolios.

(5) Other Operating Income includes: Dividends and profits (losses) on investments carried at equity; Profits (Losses) on investments held to maturity and on other investments.

Other income includes: Other operating revenues (expenses); Net provisions for risks and charges; Merger and restructuring-related charges (net of tax); Effect of purchase price allocation (net of tax); Income (Loss) after tax from discontinued operations; Minority interests

(6) If under the national legislation, the release of countercyclical provisions and/or other similar reserves is allowed, this figure for 2010 could be included either in rows "Impairments on financial assets in the banking book" or "Other income" for 2010, whereas under the EU-wide stress test methodology such release for 2011-2012 should be reported in Section D as other mitigating measures.

(7) Net profit includes profit attributable to minority interests

(8) Deferred tax assets as referred to in paragraph 69 of BCBS publication dated December 2010 : "Basel 3 – a global regulatory framework for more resilient banks and banking systems".

(9) Stock of provisions includes collective and specific provisions as well as countercyclical provisions, in the jurisdictions, where required by the national legislation.

(10) Provisions for non-defaulted exposures to sovereigns and financial institutions have been computed taking into account benchmark risk parameters (PDs and LGDs) provided by the EBA and referring to external credit ratings and assuming hypothetical scenario of rating agency downgrades of sovereigns.

(11) For definition of commercial real estate please refer to footnote (5) in the worksheet "4 - EADs".

(12) Coverage ratio = stock of provisions on defaulted assets / stock of defaulted assets expressed in EAD for the specific portfolio.

(13) Loss rate = total impairment flow (specific and collective impairment flow) for a year / total EAD for the specific portfolio (including defaulted and non-defaulted assets but excluding securitisation and counterparty credit risk exposures).

(14) All elements are be reported net of tax effects.

(15) The supervisory recognised capital ratio computed on the basis of additional mitigating measures presented in this section. The ratio is based primarily on the EBA definition, but may include other mitigating measures not recognised by the EBA methodology as having impacts in the Core Tier 1 capital, but which are considered by the national supervisory authorities as appropriate mitigating measures for the stressed conditions. Where applicable, such measures are explained in the additional announcements issued by banks/national supervisory authorities. Details of all mitigating measures are presented in the worksheet "3 - Mitigating measures).

Notes and definitions

The order of the measures follows the order of mitigating measures reported in the Section D of the worksheet "1 - Aggregate information".
 All elements are be reported net of tax effects.

(3) If under the national legislation, the release of countercyclical provisions and/or other similar reserves is allowed, this figure for 2010 could be included either in rows "Impairments on financial assets in the banking book" or "Other income" for 2010, whereas under the EU-wide stress
test methodology such release for 2011-2012 should be reported in Section D of the worksheet "1- Aggregate information" as other mitigating measures and explained in this worksheet.
 (4) If dated please insert the maturity date (dd/mm/yy) otherwise specify undated.

Notes and definitions

(1) EAD - Exposure at Default or exposure value in the meaning of the CRD.

(2) The EAD reported here are based on the methodologies and portfolio breakdowns used in the 2011 EU-wide stress test, and hence may differ from the EAD reported by banks in their Pillar 3 disclosures, which can vary based on national regulation. For example, this would affect breakdown of EAD for real estate exposures and SME exposures.

(3) Breakdown by country and macro area (e.g. Asia) when EAD >=5%. In any case coverage 100% of total EAD should be ensured (if exact mapping of some exposures to geographies is not possible, they should be allocated to the group "others").

(4) The allocation of countries and exposures to macro areas and emerging/non-emerging is according to the IMF WEO country groupings. See: http://www.imf.org/external/pubs/ft/weo/2010/01/weodata/groups.htm

(5) Residential real estate property which is or will be occupied or let by the owner, or the beneficial owner in the case of personal investment companies, and commercial real estate property, that is, offices and other commercial premises, which are recognised as eligible collateral in the meaning of the CRD, with the following criteria, which need to be met:

(a) the value of the property does not materially depend upon the credit quality of the obligor. This requirement does not preclude situations where purely macro economic factors affect both the value of the property and the performance of the borrower; and

(b) the risk of the borrower does not materially depend upon the performance of the underlying property or project, but rather on the underlying capacity of the borrower to repay the debt from other sources. As such, repayment of the facility does not materially depend on any cash flow generated by the underlying property serving as collateral.

(6) Loan to value ratio - ratio of EAD to the market value of real estate used as collateral for such exposures. Given the different methodologies applied to assessing the value, the bank is required to explain the computation of the ratio. In particular (a) whether collateral values is marked-to-market or any other valuation method is used, (b) whether the amount has been adjusted for principal repayments, and (c) how guarantees other than the underlying property are treated.

Definition of Loan to Value ratio used: a) the value of mortgage collateral is the result of a revaluation conducted monthly based on the fair value of market indices (see other explanatory phrases on Pillar 3, in the descriptive parts of tables 6 and 8);

b) the amount of exposure at the numerator of the ratio is the residual debt and the fair value of the properties is affected by the abovementioned revaluation / devaluation of the property as collateral. The LTV is therefore not reported all'origination the loan but it is based on actual value at 12 2010.

c) any other personal or financial guarantees can be used as collateral covered by mortgage exposure, but these do not enter into the calculation of the denominator of the LTV (we do not use the so-called "safeguards," which refers to the 263 for the STD).

(7) Total exposures is the total EAD according to the CRD definition based on which the bank computes RWA for credit risk. Total exposures, in addition to the exposures broken down by regulatory portfolios in this table, include EAD for securitisation transactions, counterparty credit risk, sovereigns, guaranteed by sovereigns, public sector entities and central banks.

Notes and definitions

(1) The allocation of countries and exposures to macro areas and emerging/non-emerging is according to the IMF WEO country groupings. See: http://www.imf.org/external/pubs/ft/weo/2010/01/weodata/groups.htm

(2) The exposures reported in this worksheet cover only exposures to central and local governments on immediate borrower basis, and do not include exposures to other counterparts with full or partial government guarantees (such exposures are however included in the total EAD reported in the worksheet "4 - EADs").

(3) According to the EBA methodologies, for the trading book assets banks have been allowed to offset only cash short positions having the same maturities (paragraph 202 of the Methodological note).
