

Project name: *Planta Solar - Mesembria*

Borrower: *Planta Solar Tocopilla*

Borrower`s Shareholder: *Mytilineos*

Sector: *Power Generation*

Country: *Chile*

Financial Product: *Project Finance*

Equator Principles category: *B*

Project description

The project regards a portfolio of four generation assets with an aggregated installed capacity of 588 MWp (518 MWac) located between the Arica y Parinacota and Coquimbo regions in Chile. The realization of the four projects will allow the production of approximately 1.6 terrawatt hours (TWh) of clean energy per year, with a reduction of over 600,000 tonnes of carbon dioxide emissions.

Summary of Key Environmental Impacts and Risks

The project has been developing in a Designated Country. The Environmental and Social due diligence by the independent consultant assigns a Category B, since while the project has environmental impacts, they are largely contained to the project construction/operation areas, and the Borrower is required through its authorizations and other permits to implement mitigation measures to reduce the level of significance of these impacts to a relatively low level, and to report on the compliance to regulatory agencies.
