

## Intesa Sanpaolo and Legambiente Agreement for Environmental Sustainability

Intesa Sanpaolo and Legambiente, both partners of the Campaign "Sustainable Energy Europe", signed a partnership agreement to launch specific initiatives to promote environmental sustainability and energy saving.

The agreement, announced on 26/07/2011 in Turin, is spread through the Operational Protocol "Eternit Free" and provides:

- the joint identification of the main types of energy saving measures related to the replacement of asbestos with photovoltaic roof;
- financial solutions for our customers - individuals, companies or public bodies.

Legambiente will promote the project from businesses and individuals involved in the process and is committed to a preliminary assessment of the projects that must then be presented to the branches of Intesa Sanpaolo for the loan application.

The Bank, for its part, as well as promoting the project with its network of subsidiaries, provides customers with the products specifically intended for the protocol, after evaluation of the applicant.
