

Intesa Sanpaolo receives the "Energy Efficiency Leader" Award

Intesa Sanpaolo has always paid attention to the environment and in recent years launched, on its own premises, improvements aimed at increasing energy efficiency in order to create a more sustainable environment.

Among the actions undertaken, one of the most recent concerns the cooling system of the Data Processing Center in Parma, which will lead to significant electricity savings in the coming years.

Recognizing the Intesa Sanpaolo commitment towards energy efficiency and sustainability, Trane, a leading global provider of systems and solutions for interiors and a brand of Ingersoll Rand, awarded Intesa Sanpaolo as "Energy Efficiency Leader".

The ceremony took place on September 24 at the premises of the Data Processing Center in Parma where Michel van Roozendaal, vice president of Thermo King and Trane Europe, Middle East, India and Africa for Ingersoll Rand, consigned the award to Flavio Beretta, who is responsible for the Intesa Sanpaolo premises in Milan, Turin and the Data Processing Center in Parma. The event was attended also by Roberto Gerbo, Intesa Sanpaolo Energy Manager, and Giancarlo Castellani, Councillor for the Environment of the Province of Parma.
