

Intesa Sanpaolo has been rewarded for its commitment against climate change

Intesa Sanpaolo has been rewarded with the **Industry Carbon Leader 2016 award** thanks to its position in the ET Index Research ranking: 21st out of 300 at European level and 50th out of 800 at global level.

ET Research is an independent research organization that promotes environmental issues and encourages the achievement of the highest standards of transparency and sustainability through the publication of "Engaged Tracking (ET) Carbon Rankings".

Environmental protection and attention to climate change are key dimensions of the commitment of Intesa Sanpaolo, which pursues a progressive reduction of its emissions and therefore of its ecological footprint through energy efficiency initiatives and prevalent use of energy from renewable sources.

Through the Sustainability Report and the corporate website pages, our bank constantly reports to the stakeholders its carbon footprint, that is the impact of carbon dioxide emissions related to its activities, and the projects put in place to avoid them.

The recognition of ET Index Research confirms the accuracy of our approach and is of particular importance given the increasingly attention from investors.
